CAREER STATEMENT

Honors recently graduated Master of Information Technology, offering a unique blend of academic excellence and hands-on project experience. My university projects, which encompassed a DevOps-driven Online Voting System, data analysis project, UI/UX project, and network security knowledge have equipped me with a diverse set of skills and technologies. My goal is to leverage this academic knowledge and practical project experience to apply to IT roles. I am enthusiastic about contributing my skills and making an impact as an integral part of your company.

EDUCATION

2020 - 2023, Master of Information Technology at Flinders University
Adelaide, Australia

Achievements:

- GPA: 6.0/7
- Chancellor's Letter of Commendation for excellent academic performance

2013 - 2016, Bachelor of Arts – Business Administration at Lincoln University
Ho Chi Minh City, Vietnam

Achievements:

- GPA: 3.01/4

PROFESSIONAL MEMBERSHIPS

2021 Cybersecurity Intro Certification, University of Science, HCMC

2016 Microsoft Excel Specialist Certification, University of Science, HCMC

DEGREE-RELATED PROJECTS

DevOps Project

Overview: The project was implemented following the Agile Model and DevOps principles. The project has been spent via four sprints: Sprint 0 for preparation and configuration and Sprint 1 to 3 for implementation, integration, and testing.

Techs used: Angular, C#, .NET, ASP Web API, ASP Entity Framework, Azure DevOps, Postman, Git

My contribution: I have participated front-end phases of the project:

- Developed the result display for candidates and party pages.
- Designed and implemented the top banner and left navigation bar.
- Integrate APIs for pages.
- Assisted with various other tasks throughout the project.

Data Analysis Project

Overview: Utilize R to analyse the Sample-supplies data stored in MongoDB, including tasks such as data wrangling, transformation, analysis, modelling, and communication for project completion.

My contribution:

- Make the plan, collect data
- Data wrangling, transformation data
- Data modelling

Group Task List Manager Project

Overview: Developed a Group Task List Manager website using web technologies, focusing on delivering an intuitive and user-friendly UI and UX through a structured development process comprising four cycles.

Techs used: HTML, CSS, JavaScript, PHP, and MySQL database, AMPPS.

My contribution:

- Designed the mock-ups and storyboard for the web application's functionality.
- Implemented frontend functions, including Login/Logout, Logs, adding projects, and commonly used functions.
- Designed the entire database structure and prepared sample data for backend processes.
- Developed the script for the questionnaire and summarized results from various evaluation apparatuses such as SUS and SEQ for presentation.
- Provided support to other team members during their implementation tasks.

JUnit5 Test Project

Overview: Completed assignments using JUnit5 for two projects. The first assignment involved black-box testing of existing software, while the final assignment required developing a Java application called "Student Database Program." the program included functionalities such as retrieving student details, topic details, degree options, and award prizes and then using black-box and white-box to test the application.

Tech used: Java, Junit5

My contribution:

- Create a test plan
- Develop the functionality for the application.
- Conducted black box testing for both assignments.

Implement A Small Enterprise Network

Overview: Use the packet tracer on the networking academic to tackle the network diagram that is required to configure the network according to the provided instructions.

Tech used: configure the network, design IPv4 addresses, perform subnetting, and implement the network.

PROFESSIONAL EXPERIENCE

Feb 2021 to Nov 2021
